Abstract (en)
This application improves the inclined cooker hood. This application provides an inclined cooker hood, including a smoke inlet and an upper smoke guide plate (1), where the upper smoke guide plate (1) is adapted to switch between a close position and an opening position; when the upper smoke guide plate (1) is at the opening position, the bottom end of the upper smoke guide plate (1) extends outwards to form an eaves portion, to open the smoke inlet; and when the upper smoke guide plate (1) is at the close position, the upper smoke guide plate (1) closes the smoke inlet, further including a lower smoke guide plate (2) located below the upper smoke guide plate (1); and when the upper smoke guide plate (1) is at the close position, and an angle α between the upper smoke guide plate (1) and the lower smoke guide plate (2) is an obtuse angle. Therefore, this can improve smoke gathering effects of the inclined cooker hood in a working state.
