Abstract (en)

[origin: WO2017118483A1] The present invention refers to a kit or system or assembly comprising: a) a first plastic container (1) for holding fluids, comprising i) a threaded neck (3) projecting from a top wall (2) of said plastic container, said threaded neck defining an opening (7); ii) a lock and key device comprising one or more ribs (4) integral with the plastic container, said one or more ribs projecting from the outer surface of the top wall of the plastic container; and b) a first threaded coupling member (5) for coupling an emptying device to the plastic container, wherein the first threaded coupling member is configured to be screwed on the threaded neck of the plastic container; and c) optionally, a threaded closure cap for closing the opening of the plastic container, wherein the threaded closure cap is configured to be screwed on the threaded neck of the plastic container. Such kit or system or assembly blocks the arrangement of a threaded coupling member having an outer circumference exceeding the permissible dimension.
