Abstract (en)
[origin: WO2017118475A1] The invention relates to a crash barrier section (1), comprising a deflection body with at least one travelling gear (3) that is movable between a standby position and a displacement position. The at least one travelling gear (3) is retracted in the standby position in a receptacle (4) of the deflection body and is extended in the travel position from the receptacle (4) such that the crash barrier section (1) is movable on a support (5), in particular a road section. The at least one travelling gear (3) is mounted so that it can pivot or rotate in such a way that its direction of travel is controllable.
