Abstract (en)  
[origin: WO2017118453A1] The invention relates to a construction machine comprising an upper structure (1) and a lower structure (2), wherein a primer mover (11) with a hydraulic and power supply (13) is provided in the upper structure (1), a track running gear (21) which is rotatably driven by at least one track drive hydraulic motor (22) powered by the hydraulic supply (12) is provided in the lower structure (2), a hydraulically liftable and lowerable grader blade (23) is arranged on the lower structure, on at least one front side (20) of the lower structure (2), and a fourth hydraulic line pair (44) connected to the hydraulic supply, with a hydraulic quick-connect coupling (24), is provided on the lower structure close to the grader blade as well as a quick-change device (26) provided on the grader blade, such that hydraulically drivable attachments can be connected to the quick-change device on the grader blade of the lower structure.
