Abstract (en)

[origin: WO2017118685A1] The invention relates to a device for moving a movable building part, in particular for opening and/or closing a window, a window sash, a door, or the like, having a moving element for moving the building part and having a drive (8), which interacts with the moving element in order to move the building part in a non-manual manner. The drive (8) can be brought into and/or out of interaction with the moving element, wherein the moving element, when not interacting with the drive (8), can be manually moved in order to manually move the building part.
