Abstract (en)  
[origin: WO2017144298A1] A user interface allows a user to select a window (15), which is to be placed somewhere, on a graphic user surface (11) by means of a first user action (41), and select, by means of a third user action (43), a target display unit (3), e.g. a screen or a large projection screen, on which the window (15) to be placed is then displayed. In one variant, the third user action (43) allows each display unit (2, 3) to be selected in a diagram (13).
