Abstract (en)

The present invention relates to a collapsible chair, bedchair, bed (10) or other article having at least one leg (18) which is pivotally connected to a main support part (12, 42) of the article (10). As a result, the leg (18) is moveable from a stowable position in which it is substantially adjacent to and parallel to the main support part (12, 42), to an extended position in which it extends in an intended downward direction from the main support part (12, 42). The pivotal connection is effected by way of a bracket (20) which is connected to the main support part (12, 42) at a first bracket pivot (44). The bracket (20) is connected to the said at least one leg (18) at a second bracket pivot (50) which is spaced apart from the said first bracket pivot (44).
