Abstract (en)

[origin: EP3401533A1] The invention relates to a valve (1) for regulating a flow cross section in a throttle flap connector, having a throttle flap which is mounted in the throttle flap connector so as to be rotatable about an axis of rotation, wherein the throttle flap is rotatable about the axis of rotation, by means of an actuator which acts on the throttle flap, counter to a force generated by a mechanical spring (6), wherein the throttle flap, in at least a first position, is fixable in said first position by means of a magnet device (8).
