Abstract (en)
In a first aspect, the invention relates to a ceiling element for controlling the temperature in an internal space with ceiling, the ceiling element comprising an air channel that is provided at the lower side with an air guide plate, in which that air channel is moreover provided with a plurality of blow openings that are grouped along the length and at both sides of the air channel into successive clusters, in which the clusters of blow openings are arranged alternatively crosswise along both sides of the air channel. In a second aspect, the invention relates to a system comprising one or more of such ceiling elements. In a third aspect, the invention relates to a kit for providing a ceiling element at an internal space with ceiling.
