Abstract (en)

[origin: WO2017187041A1] The present invention concerns a dispenser (1) for dispensing precut wiping material in the form of a reel of tape that can be unwound. The dispenser (1) comprises a housing (2), a cover and a module (4). The module (4) comprises two side walls (5), a guide device, a flap and a plate (9). A space for guiding and clamping the tape is delimited between the flap and the plate (9). The module (4) comprises a system providing relative clearance (10) between the flap and the plate (9), varying the configuration of said space. The clearance system (10) comprises four transverse rods (86) formed projecting from the side edges of the flap, with two spaced-apart rods per side edge, and four housings (56) provided in the side walls (5), with two housings (56) per side wall (4). Each housing (56) receives one of the rods (86) and comprises a longitudinal part (57) and a vertical part (58). A clearance is thus defined longitudinally and vertically between each rod (86) and the corresponding housing (56).
