Abstract (en)

[origin: WO2017121889A2] The aim of the invention is to simplify a device for releasing the clamping of a double gearwheel in a sheet-fed rotary printing press for face printing or face printing and reverse printing. To this end, an annular piston (41) is arranged in an annular cylinder (40) coaxially with respect to an axial bearing (33) on the cylinder pin (10) of a printing unit cylinder of the sheet-fed rotary printing press.
