Abstract (en)
[origin: WO2017121441A1] The invention relates to a maintenance vehicle (1) having side walls (8) for creating a work space (9) bounded by said side walls for a work force on a track (7), which side walls are arranged on a vehicle frame (3) and can be spaced apart from each other in the vehicle transverse direction (11). For the processing of a track segment located within the work space (9), an industrial robot (18), having at least three axes of motion (14), media couplings (15) for energy supply, and a tool coupling (16) for selective connection to a track-processing tool (17), is arranged on the vehicle (1).
