Abstract (en)

[origin: WO2017121761A1] The invention relates to a machine for launching targets comprising a frame on which a mounting is assembled, relative to which a barrel is rotatably assembled according to an axis of rotation and in a direction of rotation, said barrel comprising a plurality of columns for storing stacks of targets, the storage columns being arranged according to a ring defining an inner surface of the barrel, the inner space of the barrel advantageously comprising at least one additional element for storing targets.
