Abstract (en)
[origin: WO2017121839A1] Horology movement comprising a jumping display mechanism (1) comprising: a display mobile (2) intended to drive a display member in jumps, according to a first period, an actuating lever (4) designed to act on the display mobile (2), an elastic member (27) tending to move the actuating lever (4) in the direction of the display mobile (2), a first control member (14, 20), driven in the first period, to lead the actuating lever (4) into an armed position and apply load to the elastic member (27), a latch designed to temporarily lock the actuating lever (4) in its armed position, before releasing it so that it can actuate the display mobile (2), a second control member (36) designed to neutralise the latch and release the actuating lever (4), the second control member (36) being driven in such a way as to neutralise the latch according to a second period less than the first period.
