Abstract (en)

[origin: WO2017121479A1] The invention relates to a method for controlling (PC) an operating point of a set of electronic components (EN), taking into account the ageing of the electronic components, by measuring an operating value (MV) resulting from the value of a generated signal and by establishing a difference ( $\Delta$ ) between the measured operating value (MV) and a typical nominal operating value (MV) of the electronic components.
