Abstract (en)

[origin: US2018333873A1] The invention relates to a knife with a knife body and with at least one blade with a cutting edge an additional tool is held on the knife body, wherein the tool is detachably held on the knife body. The special feature consists in the fact that the tool has at least two working parts, and is provided with a holding part which, in at least two different relative positions, can be brought into engagement with an seat of a tool seat of the knife body, such that either one of the working parts can be arranged in a working position in which it can be used by a user, while the other working part is in a stowed position.
