Abstract (en)
[origin: EP3403831A1] A printing apparatus includes a head section which discharges a plurality of types of liquid, a plurality of liquid flow paths which supply the liquids to the head section, and a manifold which bundles the plurality of liquid flow paths to connect the liquid flow paths to the head section, in which the liquid flow paths are connected to manifold pipes which are provided in an inner portion of a housing which has a bottomed lidless box shape of the manifold, and in which the manifold is attachable and detachable with respect to the head section.
