Abstract (en)

According to the present invention, a throw-in lock (100) is proposed, comprising a drum unit (200) having two drums arranged rotatably around a common axis, wherein an inner drum (10) is rotatable between a receiving position and a transfer position, wherein an outer drum (20) of the two drums is rotatable between an open position and a closed position, wherein a support (50) of the two drums allows a rotation of the outer drum independent from the inner drum and a rotation of the inner drum independent from the outer drum, and wherein a motor (70) is provided for rotating the inner drum in dependence of a signal from a sensor (60), and wherein a weighing device (54) weighs the inner drum.
