Abstract (en)

[origin: EP3404182A1] A braking device (10) for the braked movement of parts of furniture or furniture accessories, wherein such parts are movable relative to one another, the braking device (10) comprises a first component (11) and a second component (12) that are mounted one inside the other movably with respect to each other around a common rotation axis (A), a viscous medium interposed between the first component (11) and the second component (12), an actuation element (13) adapted to be directly or indirectly actuated by one of the two parts of furniture or furniture accessories and which is integrally coupled in rotation to the first component (11) at least in the direction of rotation of the first component (11) with respect to the second component (12) that must have the braked movement, a containment body (14) which can be fixed to one of the two parts of furniture or furniture accessories and in which a housing seat (15) is formed, in which the assembly comprising at least the second component (12) and the first component (11) is accommodated, wherein the second component (12) is elastically yielding, is held tightened on the first component (11) and is directly or indirectly connected to the housing seat (15) fixed in rotation with respect to the rotation axis (A).
