Abstract (en)
The present invention relates to a door frame structure comprising a door frame, a door frame protective cover, the protective cover extending beyond the lower end of the door frame so that when the door frame is installed in a door opening, room is left between the door frame and the threshold in order to allow air to circulate in the structures, and at least one molding, wherein room is left between the molding and the door frame and/or the molding and the wall for air to circulate in the structures, the molding being arranged to the door frame so that air circulates through the lower end of the molding into the room between the molding and the door frame and/or the molding and the wall, and wherein the air flows through the upper end of the molding out of the structure.
