Abstract (en)

A high voltage assembly (2) comprises: - a sealed compartment (4) containing an active component (6) at least partly surrounded by an insulation liquid (8); - a free breathing conservator (10); - a Buchholz relay (12) arranged above a level (L14) of a cover (14) of the sealed compartment (4); and a pipe arrangement (16) comprising: - a first pipe section (18) connecting the interior of the sealed compartment (4) at the cover (14) of the sealed compartment (4) to the Buchholz relay (12); and - a second pipe section (20) connecting the Buchholz relay (12) with the interior of the free breathing conservator (10) at a lower portion (22) of the free breathing conservator (10), wherein in a normal operating state (N) of the high voltage assembly (2) a hydraulic diameter of the pipe arrangement (16) is maintained constant and the level of insulation liquid in the conservator (10) is maintained below the level (L14) of the cover (14) of the sealed compartment (4).
