Abstract (en)  
[origin: CN108933064A] The invention relates to an auxiliary module (1) having a casing (10) comprising on its upper or lower surface (13, 15) access openings (17A, 17B) for accessing electrical connection terminals and for at least one inlet (19) of the electrical connection line (3, 4). According to the invention, the housing comprises means for mounting an inner member (50) having two apertures (52A, 52B) opening to a face (52) of the first inner member and two channels (53A, 53B), said means being arranged symmetrically about an intermediate plane parallel to said upper and lower surfaces of the casing such that said first internal element can be symmetrical with respect to said intermediate plane positions mounted on the internal device such that the aperture and the passage form the opening and the inlet in the upper or lower surface of the housing.
