Abstract (en)

[origin: US2016353875A1] A folding table has a pair of regular, non-foldable legs and a pair of foldable legs that move between a use configuration and a storage configuration. The foldable legs incorporate a two position lock mechanism that selectively allows the legs to be locked in either the use configuration where the legs cooperatively support the table top or the storage configuration where the legs are positioned parallel to the table top. The table top includes a notched lip that allows the legs to lie substantially flush against the table top.
