Abstract (en)

[origin: WO2017125309A1] The invention relates to a wear-resistant element (16c) for partial insertion into a recess on a surface of a wear area of a communting device, the wear-resistant element (16c) comprising a fastening section (24) which can be connected to the recess on the surface of the wear area and has a wear portion (22) that protrudes at least in part from the surface of the wear area. According to the invention, the fastening section (24) comprises a material that has a lower wear resistance than the material of the wear portion (22), the wear portion (22) extends beyond the fastening section (24) in the vertical direction of the wear-resistant element (16c), and the fastening section (24) is in the form of a sleeve.
