Abstract (en)

[origin: WO2016207584A2] Compact Wheels-to-Cycle Alignment Device comprised primarily of a rigid structure that bouses Alignment Aperture 4. The device is mounted to the cycle at a designated location with the Alignment Aperture 4 positions over the central seam of the wheels. Any necessary adjustments are made to the cycle to ensure the Alignment Arrow/Gauge 5 runs in a straight line along the central plane of the wheel. The device is mounted on the cycle at designated points such as has handlebar, handlebar stem, saddle rail, seat post or any other convenient position on the cycle frame using hooks or any other appropriate mounting mechanism that can ensure the device does not move independent of the cycle.
