Abstract (en)
[origin: WO2017125169A1] The present invention relates to a façade cladding system, comprising support profiles (1) fixed to a façade structure, panels supported by the support profiles (1), and resting arrangements which are fixed to the panels and rest on the support profiles (1). The resting arrangements comprise a rod (9) which is inserted into a hole formed by a sleeve embedded in the panel and a resting part (10) fixed to the rod (9). The resting part (10) has resting sides through which it can rest on the bottom of a cradle (3) formed by the support profile (1), and a through hole which snugly receives the rod (9) and is at a different distance from the resting sides.
