Abstract (en)

[origin: EP3407028A1] [Object] Present technology relates to an information processing apparatus, an information processing method, and a program that each enable a user to recognize that precision of a sensor is degraded and precision of a processing result is degraded when such a situation occurs. [Solution] A sensor; a processing unit that performs processing using data from the sensor; a determination unit that determines whether or not precision of the sensor has been degraded; and a notification unit that notifies a user that the precision of the sensor has been degraded in a case in which it is determined that the precision of the sensor has been degraded are included. The processing unit executes processing based on a predetermined application. In addition, the application is an application that performs action recognition of the user. The determination unit determines whether or not precision of a result of the action recognition based on the application has been degraded due to the precision of the sensor. The present technology can be applied to an information processing apparatus such as a smartphone.
