Abstract (en)

[origin: WO2017129541A1] Embodiments of the present invention provide a tube which has a region that tapers in the direction of an end of the tube; an opening at the end of the tube for receiving a sample material; and a microfluidic structure which is arranged inside the tube in the tapering region thereof and which is connected to the opening, wherein the microfluidic structure is formed so as to carry out a multi-stage bioanalytical reaction with the sample material.
