Abstract (en)
[origin: WO2017129789A1] The invention relates to a hammer device (1), in particular a manual hammer device (1), comprising a percussion mechanism (12) which is designed to carry out a percussion movement on a tool (2) in the axial direction (A). Said hammer device is characterised in that it comprises at least one percussion force storing means (15) designed to at least partially store a percussion force of the percussion mechanism (12) in the axial direction (A), and to at least partially release said force in the form of a percussion force in the opposite axial direction (B).
