Abstract (en)
[origin: WO2017130239A1] A liquid cartridge comprises a liquid chamber (36), a liquid outlet (60), and a body positioned in the chamber being movable between a first position wherein movement of the body is restricted, and a second position wherein the body is movable along a movement path between the first and second positions, the body having a plurality of sides. The liquid cartridge further comprises a detector positioned in the chamber movable in response to movement of the body between the first and second positions, a restriction member. Plurality of openings are defined in the body and extending into the body through at least two sides of the body. Plurality of resist surfaces are formed by the plurality of openings, the resist surfaces is configured to resist movement of the body between the first and second positions.
