Abstract (en)

[origin: WO2017129619A1] The invention relates to a method for machining a holding device (10) for a light module (6) of a lighting device (2) of a motor vehicle. An SMD semiconductor light source component (12) arranged on the holding device (10) is operated for light generation. An emission characteristic of a light-emitting surface of the SMD semiconductor light source component (12) is determined. A mechanical feature with regard to the holding device (10) is specified depending upon the emission characteristic. An optical element (14) which co-operates optically with the SMD semiconductor light source component (12) is specified depending upon the mechanical feature with regard to the SMD semiconductor light source component (12).
