Abstract (en)
[origin: EP3409127A1] A base/additive product feeding unit (1) for a machine for the production and/or distribution of ice cream, or other ice cream product, comprises a plurality of storage tanks (Sb1, Sb2, Sb3, Sbn, Sba) for delivering predetermined quantities of base/additive products used to prepare ice cream in a batch freezing chamber provided with a stirrer and heat treatment means. The connection between the storage tanks and the batch freezing chamber is accomplished by an intake (11) having a plurality of side inputs (12) connected to respective storage tanks (Sb1, Sb2, Sb3, Sbn) and an additional input (13) made in a cover (14) of the intake (11) and connected to a further storage tank (Sba) in such a way as to allow at least two storage tanks (Sb1, Sba) to be superposed on each other.
