Abstract (en)

A tension cord mounting for an architectural covering, configured to be mounted to an outside edge of an architectural structure, the tension cord mounting including a cord holder for engaging one or more cords; wherein the cord holder includes a plurality of walls arranged in fixed positions relative to one another such that the walls define a pathway through the cord holder for one or more cords; and the pathway is configured such that, when a cord is placed within the pathway, the cord includes at least one change of direction and is arranged such that, when the cord is under tension, friction between the cord and the walls of the cord holder engages the cord with the cord holder.
