Abstract (en)

[origin: WO2017134539A1] The present invention refers to a dishwashing appliance, comprising a cabinet with a compartment to receive articles to be washed and a door used to close said compartment, said cabinet and said door being provided with a device for retaining and automatic opening of the door. It is provided for according to the present invention that a device (6a; 6b) for retaining and automatic door (3) opening comprises a latch (6a) which is arranged on and, respectively, in a cabinet (2) at the side opposite to hinges (4) of the door (3), and a retaining element (6b) which is arranged in the door (3) in order to cooperate with said latch (6a), wherein an actuator (15) arranged in the door (3) drives said retaining element (6b).
