Abstract (en)

[origin: WO2017134114A1] The invention relates to a device (100) for drying a strip stock (101) of a printing press having a first drying nozzle (103) and a second drying nozzle (105), wherein the first drying nozzle (103) and the second drying nozzle (105) are each designed to apply drying air to the strip stock (101), and wherein the first drying nozzle is designed such that the first drying nozzle applies drying air to the strip stock (101) in a first feed direction (107) and discharges drying air from the strip stock (101) in a first discharge direction (111), and the second drying nozzle (105) is designed such that the second drying nozzle applies drying air to the strip stock (101) in a second feed direction (109) and discharges drying air from the strip stock (101) in a second discharge direction (113), wherein the first discharge direction (111) of the first drying nozzle (103) and the second discharge direction (113) of the second drying nozzle (105) are arranged in an outflow channel (115) extending between the first drying nozzle (103) and the second drying nozzle (105).
