Abstract (en)

[origin: WO2017134370A1] The invention concerns a device for anchoring an erected structure in the ground without concrete. It is made up in part of a box-type structure (10) connected to an interface element (20) to which an erected structure (91), such as a lamp post, is fixed. The lower part of the central box (11) of the box-type structure (10) is connected to a base plate (12). An assembly of additional, lateral boxes (14) can be arranged, depending on the dimensions of the erected structure, and the forces, such as wind forces, it will be required to withstand.
