Abstract (en)

[origin: WO2017134499A1] A wireless device obtains an extended discontinuous reception (eDRX) configuration for the wireless device, obtains a minimization of drive tests (MDT) configuration for the wireless device, and adapts at least one of the eDRX configuration and the MDT configuration such that the wireless device completes an MDT measurement according to the MDT configuration within a predetermined number of paging transmission windows (PTWs) associated with the eDRX configuration. The wireless device performs the MDT measurement within the predetermined number of PTWs according to the adapted at least one of the eDRX configuration and the MDT configuration.
