Abstract (en)
[origin: US2017227210A1] A lighting control console controls a lighting system, wherein digital adjusting commands are generated in the lighting control console, which commands can be transmitted to the lighting devices of the lighting system via data links. The lighting control console includes at least one digital processor and at least one digital memory for generating, managing and storing the adjusting commands, and wherein the lighting control console includes at least one display device for electronically displaying image elements, and wherein at least one rotary control is disposed in the operating panel of the lighting control console. The rotary control allows users to enter operating commands by rotating the rotary control. An electronic display field is disposed at the visible side of the rotary control visible to the user displays image contents related to the rotary control.
