Abstract (en)

A hearing system includes a hearing device, the hearing device comprising: an input module for providing a first input signal, the input module comprising a first microphone; a processor for processing the first input signal and providing a processor output signal based on the first input signal; and a receiver for providing an audio output signal based on the processor output signal; wherein the hearing system is configured to obtain a user input indicative of a change from a first primary setting to a first secondary setting of the hearing device, and wherein the hearing device, upon a detection of the change from the first primary setting to the first secondary setting, is configured to output a secondary audio output signal according to the first secondary setting.
