Abstract (en)

[origin: WO2017137520A1] Proposed is a method for covering inner walls of a cavity with a protective layer (50) made of anti-corrosion wax, in particular for use on motor vehicle bodies (10) and add-on parts for motor vehicle bodies. The anti-corrosion wax is brought into an atomized form (protective agent mist (40)) by means of an atomizer (31) and is fed to the cavity (12) to be preserved through an outlet opening (32). The protective agent mist (40) impinges on the inner walls of the cavity (12) and forms an anti-corrosion agent layer (50) there.
