Abstract (en)

[origin: WO2017137108A1] Disclosed is a fender for a motor vehicle, comprising at least a first fender portion (21) and a second fender portion (22), the second fender portion (22) being rotatably connected to the first fender portion (21) so as to be able to rotate at least between an operational position and an open position. Furthermore, the rotatable connection between the second fender portion (22) and the first fender portion (21) is provided by two pin-shaped connecting elements (23a, 23b).
