Abstract (en)

[origin: WO2017137883A1] A closing element or cap, in particular for bottles or similar containers, said cap comprising a main closure body (2) adapted to be positioned, in use, at the aperture of said bottle or similar container so as to close said aperture, wherein said closure body (2) comprises at least one through venting hole (23) adapted to allow gases possibly contained in said bottle or similar container to exit, and in that said closing element or cap comprises a movable shutter (6) adapted to be switched between a first closing position and a second opening or venting position, wherein, in said first closing position, said shutter (6) prevents said gases from exiting through said at least one through hole (23), while in said second opening position, said shutter (6) allows said gases to exit through said at least one through hole (23).
