Abstract (en)

[origin: WO2017137030A1] The invention relates to a method and to a device for impinging on a motor vehicle door (1) in the sense of a deceleration, in particular for avoiding collisions. There is at least one sensor (9, 11, 12, 13, 14, 15) assigned to the motor vehicle door (1). Furthermore, as a function of signals from the sensor (9, 11, 12, 13, 14, 15), the control unit (8) actuates the locking device (7) for locking the motor vehicle door (1). According to the invention, the locking device (7) applies a preferably variable braking torque to the motor vehicle door (1), taking into account a braking start predetermined by the control unit (8).
