Abstract (en)
[origin: WO2017137173A1] The invention relates to a laundry care appliance (100) having a pump (105) for pumping washing liquid, wherein the pump (105) has a pump housing (107) with a hollow space (117, 119, 121), wherein the laundry care appliance (100) has a component which is accommodated in the hollow space (117, 119, 121), and wherein a sealing element (129, 131, 133, 135) made of plastic is arranged at an inner side (108) of the hollow space (117, 119, 121) of the pump housing (107). The sealing element (129, 131, 133, 135) is connected in an integrally bonded manner to the pump housing (107). The sealing element (129, 131, 133, 135) subjects the pump housing (107) and the component to pressure in order to ensure a fluidic seal between the pump housing (107) and the component.
