Abstract (en)

[origin: WO2017137261A1] The invention relates to a light strip system, having an elongate carrier rail (1) which extends along a longitudinal axis (L) and has a U shape in a cross section normal to the longitudinal axis (L) as viewed in a first approximation, so that a first U-limb (2), a second U-limb (3) and a connecting limb (4), which connects the two U-limbs (2, 3) to one another, are formed, wherein at least one passage opening (5, 5') is formed in the connecting limb (4), and also having at least one luminaire which is designed to be connected to the carrier rail (1), wherein at least one covering element (6) which is designed to be fitted to the carrier rail (1) so as to cover the at least one passage opening (5, 5') is provided.
