Abstract (en)
[origin: WO2017137359A1] The invention relates to a wristwatch (1) comprising: a middle (4) having a side wall (24), defining a median plane and including attachment members for securing respective first and second ends (32) of a strap to the middle (4), and a cover (26) capable of pivoting, relative to the middle (4), between a first closed position in which the ends (32) of the strap are locked onto the middle (4), and a second open position in which the ends (32) of the strap are free to be separated from the middle (4), the cover (26) being arranged so as pivot about a rotational axis parallel to the median plane, and each attachment member including a hole (44) provided in the side wall (24) and intended for receiving the corresponding end (32) of the strap by insertion in a direction substantially parallel to the median plane.
