Abstract (en)

[origin: WO2017137564A1] The present invention provides a method of performing an automatic repeat request mechanism in a mobile communication system, the method comprising sending user data from a first device to a second device over a logical channel and sending over a control channel an associated control message from a medium access control layer of the first device to a medium access control layer of the second device, the associated control message comprising a logical channel identifier for identifying the logical channel over which the user data is transmitted.
