Abstract (en)
[origin: WO2018229164A1] The invention relates to a method for producing a decorative and textured surface having differing degrees of gloss, comprising the following steps: - feeding a workpiece (1.0) to a device for the application of a varnish, - applying, across the whole surface, a first liquid varnish layer (1.4) with course texturing wherein there is a thickness difference between thicker regions and thinner regions of at least 50 µm and particularly at least 100 µm, - and particularly digitally spraying droplets onto subsurfaces of the first varnish layer (1.4) on the workpiece (1.0), preferably using an at least partially transparent varnish, for the application of a second varnish layer (1.5) onto the first varnish layer (1.4), wherein said second varnish layer (1.5) has a different degree of gloss to the first varnish layer (1.4) after curing. The invention also relates to a device for carrying out the claimed method.
