Abstract (en)
[origin: US2014263436A1] The container includes a body portion, an upper end portion, and a cap portion. The body portion, the end portion and the cap portion may be molded as one piece. The cap portion may be attached to the body portion with a hinge. The body portion may have a side wall which allows the user to squeeze the side wall and dispense the product which is stored within the container. The container may include a valve. The valve may include an opening which allows the contents to be dispensed. The valve may be attached using a retention feature, a retaining ring, an adhesive and/or fusion. The retaining ring may engage the retention feature. After the valve is assembled to the container, the container is filled with a product and the lower end portion may be closed by using a heat seal.
