Abstract (en)
[origin: CN109082734A] The invention provides a combing machine (1), comprising a plurality of combing units (11) accommodated in a shared housing (10). The combing units are structured for processing fiber strips guided to the combing unit (11). A suction mechanism (12) is provided for guiding out contents of the combing unit (11) from at least one collecting chamber (13). Each combing unit (11) is provided with maintenance holes of maintenance turning plates (14). Via the maintenance holes, the collecting chamber (13) can be touched from outside. Through a sensing element (15), the closing state of at least two maintenance turning plates (14) can be monitored.
